

Mark Segal, Technical Requirements

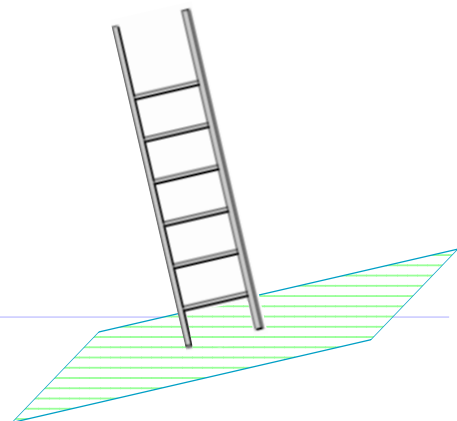

The performance area, should be a hard, flat, dry and even surface of at least 5 square metres, not grass. Outdoors it should ideally be clear of overhanging or overhead obstructions such as trees, wires etc. Indoors a minimum 5 metres unobstructed headroom is required.

If performances are to take place on a stage, the staging must be stable, flat, strong and rigid without gaps between sections.

The performance area should ideally be situated away from sources of noise disturbance such as P.A systems, heavy traffic, amplified music etc.

A slight incline is acceptable when the orientation is across the slope and both feet of the ladder remain at the same level.

It is not possible to balance when the orientation is side on to the slope!
